WHY is the One Health fantasy so important to Fauci and the globalists?

Fri 8:51 am +01:00, 27 Oct 2023

posted by Tapestry

Another reason the pandemic origin had to be a natural zoonotic event—otherwise why give WHO power to control our ecosystems?

MERYL NASS
OCT 27

READ IN APP

PPPR is a new acronym that stands for pandemic prevention, preparedness and response—as if anyone knows how to do any of these.

Why have the US government and intelligence agencies clung to the "natural"/"spillover" narrative of the pandemic's origin, instead of admitting its undeniable lab origin?

- Because **the entire justification** for the **PPPR response** and the justification for the **One Health approach** rely on COVID and other pandemics arising from spillover events
- Without this fairy tale there is no meaningful reason to apply One Health to anything
- It is **One Health** that gives the globalists the **key to the coup**: it allows them to wrap up the whole world (people, animals, ecosystems) under the control of the WHO's pandemic response

See, you connect all these things together and call it health, err, I mean One Health

One Health, EcoHealth, Planetary Health, and Veterinary Public Health: A Deeper Dive

One Health, EcoHealth, Planetary Health, and Veterinary Public Health are among the terms that have gained traction in the international community as approaches to address health threats and challenges at the human-animal-environmental health interface. The approaches are similar in all, promoting a more thorough and integrated understanding of the links between humans, animals, and/or the environment, including the anthropogenic forces acting on ecosystem dynamics. In addition, each reinforces the importance of collaborating across sectors and broadening the scope of health and its determinants.

G20 countries agree to implement One Health for better global health security

<https://www.fao.org/indonesia/news/detail-events/en/c/1539057/>

10/06/2022 Lombok (10/6) - The COVID-19 pandemic has reiterated that previously unknown diseases can emerge at any time, threatening health, well-being, and economies of all societies. **Interactions at the human-animal-environment interface are the basis of the emergence of such diseases, therefore, a One Health approach to prevent, detect and control emerging zoonotic diseases is paramount.**

"**There is no health without One Health,**" said Indonesian Minister of Health, Budi Gunadi Sadikin, in his opening remarks at the G20 One Health Side Event entitled "Implementing One Health to Achieve Health Security for Economic Stability." Sadikin further emphasized the urgent need of international collaboration to sustainably prevent and contain future pandemics through **One Health as a long-term, viable, and sustainable approach.**

Keith Sumption, Chief Veterinary Officer of the Food and Agriculture Organization of the United Nations (FAO), reaffirmed Sadikin's statement. **"We will not prevent future pandemics without One Health, because One Health is the essential part of preventing, and managing spillovers from animals to humans,"** said Sumption.

All the big international, globalist organizations just love One Health:

"WHO and partner organizations are working to increase the adoption of the **One Health approach** in national, regional and international health policies through intersectoral political and strategic leadership; operationalizing responses and scaling up of country support, including research and policy assessment; strengthening country capacities; and monitoring of risks and preparedness for early detection and response to emerging pathogens."

https://www.who.int/health-topics/one-health#tab=tab_3nd
response to emerging pathogens.

ONE HEALTH and the EPA

"Why is One Health Important?"

- People, animals, and environments are interconnected so when you improve the health of one, you improve the health of the others. Humans interact with animals and plants through agriculture and food, outdoor recreation, and shared environments. Because people, animals, and plants share environments, they are all exposed to the same environmental factors.
- One Health is a holistic approach that allows us to see the full picture and protect all pillars."

<https://www.epa.gov/one-health/learn-about-one-health>

CDC struggles trying to explain the importance of One Health, but they sure are enthusiastic about teaching everyone about it and spreading out a bit of \$ to push the idea of One Health, even though it is really hard to explain how it benefits anything. Well, it might help save you from an infection caused by a bite from your pet turtle. Maybe.

ONE HEALTH and CDC

What The One Health Office Is Doing In The U.S.

<https://www.cdc.gov/onehealth/who-we-are/one-health-office-fact-sheet.html>

- Working with multiple partners to **educate rural youth** in agricultural organizations like 4-H and the Future Farmers of America about preventing the spread of diseases shared between people and animals like zoonotic influenza viruses.
- Responding to **outbreaks and public health emergencies**, such as examining the risk of Ebola and Zika viruses to pets and other animals.
- Protecting Americans by preventing **diseases they can get from their pets** like *Salmonella* infection and rat bite fever.

One Health is a major priority for the G20, as noted in the report of their meeting in New Delhi last month.

G20 meeting in Delhi Sept 9-10, 2023

https://www.g20.org/content/dam/gt twenty/gtwenty_new/document/G20-New-Delhi-Leaders-Declaration.pdf

- One Health
- Rules-based agriculture
- Improve access to mental health services
- Build more resilient, equitable, sustainable, and inclusive health systems to achieve Universal Health Coverage
- Joint Finance and Health Task Force
- Harness digital technologies to overcome the digital divides for all learners
- Limit global warming to 1.5°C; requires reduction in global GHG emissions of 43% by 2030 relative to the 2019 levels
- Mainstream Lifestyles for Sustainable Development
- Low-cost Financing for the Energy Transition

So with all that interest, what is One Health? Apparently the powers that be have struggled with defining it, and claim there are over 60 definitions. Let's look at a few:

What is One Health?

"One Health is an **integrated, unifying approach** that aims to **sustainably balance** and optimize the health of people, animals and ecosystems. It recognizes the health of humans, domestic and wild animals, plants, and the wider environment (including ecosystems) are closely linked and inter-dependent.

The **approach mobilizes multiple sectors**, disciplines and communities at varying levels of society to work together to foster well-being and **tackle threats to health and ecosystems**, while addressing the collective need for clean water, energy and air, safe and nutritious food, **taking action on climate changes and contributing to sustainable development.**"

https://www.onehealthcommission.org/en/why_one_health/what_is_one_health/. The OHLEP created this definition

If you understand that, you are a better man than I. Oops, better watch my pronouns. Let's try again:

The Lancet One Health Commission

"The ambition of *The Lancet* One Health Commission is to generate insight into the interconnected nature of health among humans, animals, plants, and the wider environment, and to **galvanize transformations in global governance, economics, and knowledge to ensure equitable, sustainable, and healthy socioecological systems** in the 21st century and beyond."

<https://www.med.uio.no/helsam/english/research/centres/global-health/networks/one-health-networks/>

Got it? We are globalizing transformation in just about everything. I am certain that is a worthy goal for a Young Global Leader. BTW, while Klaus Schwab is GREAT at getting his Leaders installed in governments, none of them

seem able to actually govern...at least not honestly. He has picked a bunch of good presenters, many who are easy on the eyes, but they lack depth, lack emotional range. Who are they, really? Shallow puppets like Gavin Newsom, Justin Trudeau and Jacinda Ardern played their part, and they played it well, but they could not perform without a script.

Well, if we can't understand One Health, can we at least find out where it came from?

The 15 yr History of the One Health phenomenon

"In response to the 2002–2004 outbreak of SARS and H5N1 avian influenza, which generated global attention, the World Wildlife Conservation Association officially proposed the concept of One Health and released the *Manhattan Twelve Principles* encapsulating this approach [11]. In 2005, *The Lancet* published its first reference to "One Health" in an article about the cooperation between human and animal health to strengthen health systems [12]. In 2008, *FAO, OIE, WHO, UNICEF, The World Bank and the United Nations System Influenza Coordination (UNISIC)* officially suggested One Health as the approach to deal with global epidemics [13]. In 2009, funded by the *Rockefeller Foundation*, the *One Health Commission* was established with the objective of disseminating the One Health approach more widely [14]. In 2020, the *OHHLEP* was jointly established by *FAO, OIE, WHO and UNEP*, to provide expert technical guidance on key scientific issues in One Health [15]. At the behest of the international community, countries including the United Kingdom and the United States of America established specific government entities or initiatives [16, 17] to lead administrative coordination, fundraising and policy-making relevant to One Health promotion."

<https://recommendations.theindependentpanel.org/main-report/04-what-happened-what-we've-learned-and-what-needs-to-change/>

Even though it is meaningless, it is big and it has been sent out around the world with zillions of One Health grants.

Partnerships and leveraging external innovations, tools, and capacity are critical to the success of this program. These funding opportunities will help leverage both prior and new One Health partnerships while working toward the goal of preventing or minimizing the next pandemic, and addressing future One Health challenges.

- Public Health was starved. "Over the past decade, the public health workforce has shrunk by approximately 56,000 positions primarily due to funding issues" [TFAP]
- Some Public Health academics must obtain grants to pay their salaries, and without external grants they lose their jobs.
- One Health stepped in and money started flowing, but only to those who are willing to embrace the One Health concept and push it out to others
- It's all about building the network; above is from a USDA grant [oppt'y](#)
- NIH, NSF, CDC, NGOs, Universities all disbursing funds for One Health
- <https://www.aphis.usda.gov/aphis/ourfocus/onehealth/funding-opportunities>

And the globalists know that you win through indoctrination of students. The three names I circled are all employees or contractors of EcoHealth Alliance—just in case you were not yet aware that the globalists have a limited bench and have to keep reusing their players. But it is still gobbledegook.

Expert Consensus Documents, Recommendations, and White Papers

Applying a One Health Approach in Global Health and Medicine: Enhancing Involvement of Medical Schools and Global Health Centers

Authors: Catherine Machalaba, Jill Raufman, Assaf Anyamba, Amanda M. Berrian, Franck C. J. Berthe, Gregory C. Gray, Olga Jonas, William B. Karesch, Michelle H. Larsen, Ramanan Laxminarayan, Lawrence C. Madoff, Keith Martin, Janna A. K. Mazet, Elizabeth Mumford, Tina Parker

Findings and Recommendations: The following objectives provide opportunities for One Health involvement and benefits for medical schools and global health centers by: 1) Improving One Health resource sharing in global health and medical education; 2) Creating pathways for information flow in clinical medicine and global health practice; 3) Developing innovative partnerships for improved health sector outcomes; and 4) Informing and empowering health through public outreach. These objectives can leverage existing resources to deliver value to additional settings and stakeholders through resource efficiency, more holistic and effective service delivery, and greater ability to manage determinants of poor health status. We encourage medical and global health educators, practitioners, and students to explore entry points where One Health can add value to their work from local to global scale.

I wish it was only professional schools they went after, but no, they want our kids from kindergarten on up.

The One Health basket just keeps growing. How many disparate areas can you toss into it?

From a CDC poster: now **food security**, **mental health** and **environmental pollution** have been tossed into the One Health basket

Just in case you had not figured it out by now, One Health is the key to the kingdom, the answer to society's problems, and a ray of sunshine.

Here, the One Health Commission has produced a graphic claiming that One Health is the way to solve our global challenges!

But they never tell us HOW they will solve a single one

Here is a bunch more stuff that is included in One Health

From the One Health Commission

<https://www.onehealthcommission.org/en/why-one-health/why-at-is-one-health/>

Scope of One Health

Some people misunderstand and think that One Health is about everything therefore it must be about nothing. But the truth is that One Health thinking (see definition above) and implementation is needed in so many arenas that it just seems to be about 'everything'.

Because of the inextricable interconnectedness of animal, environmental, human, plant and planet health, here are a few areas that urgently need the One Health approach, at all levels of academia, government, industry, policy and research:

- Agricultural production and land use
- Animals as Sentinels for Environmental agent and contaminants detection and response
- Antimicrobial resistance mitigation
- Biodiversity / Conservation Medicine
- Climate change and impacts of climate on health of animals, ecosystems, and humans
- Clinical medicine needs for interrelationship between the health professions
- Communications and outreach
- Comparative Medicine: commonality of diseases among people and animals such as cancer, obesity, and diabetes
- Disaster preparedness and response
- Disease surveillance, prevention and response, both infectious (zoonotic) and chronic / non-communicable diseases
- Economics / Complex Systems, Civil Society
- Environmental Health
- Food Safety and Security
- Global trade, commerce and security
- Human - Animal bond
- Natural Resources Conservation
- Occupational Health Risks
- Plant / Soil health
- Professional education and training of the Next Generation of One Health professionals
- Public policy and regulation
- Research, both basic and translational
- Vector-Borne Diseases
- Water Safety and Security
- Welfare / Well-being of animals, humans, ecosystems and planet

But there is always a party pooper at every party. A few Chinese scientists venture to tell us the Emperor has no clothes. In very careful and difficult-to-comprehend language, of course.

An admission that One Health lacks a conceptual system, real world evidence, and a method for being implemented and evaluated

Towards a global One Health index: a potential assessment tool for One Health performance

<https://doi.org/10.1186/s40249-022-00979-9>—May 22, 2022

"Although the One Health approach has been well-recognized [23], its determinants and practical enablers have yet to be clarified. The dearth of real-world evidence has hindered the identification of gaps in the human–animal–environment health nexus, which hampers the application of a One Health approach in shaping policies and practice. A well-constructed conceptual system, along with an appropriate evaluation scheme, is needed to better understand the current situation and to set goals and strategies for One Health implementation..."

Well that didn't stop the One Health onslaught in the least. The Lancet just keeps those One Health articles coming. Now healthcare itself is polluting our world. One Health to the rescue!

Environmental sustainability of health systems: time to act

The Lancet. April 21, 2023. DOI: [https://doi.org/10.1016/S0140-6736\(23\)00730-4](https://doi.org/10.1016/S0140-6736(23)00730-4)

- "The health-care sector faces a great climate change paradox: health-care facilities and health-care givers are responsible for providing care to those **who face harm and illness caused by climate change**, but health systems also bear responsibility for the extensive environmental waste and contamination that contribute to these threats.
- **Health care contributes nearly 5% of greenhouse gas emissions** globally; and if the sector was a country, it would be the fifth largest polluter in the world.
- As the Pan-European Commission on Health and Sustainable Development and others have underlined, **the world is at a crucial moment that requires the operationalisation of One Health and the re-envisionment of health-care practices**, the determinants of health, and collaboration and coordination across sectors.
- A first step in reducing countries' carbon footprints is to work with those who **are tackling climate change and biodiversity loss issues to foster environmental sustainability within health systems** and the way they function."

But we all know this whole thing is total BS. As I stated in the European Parliament in May:

'ONE HEALTH' is a scam to enable the WHO to declare jurisdiction over the entire planet

<https://www.who.int/news-room/questions-and-answers/item/one-health>

- **The WHO expert definition:** *"an integrated unifying approach that aims to sustainably balance and optimize the health of people, animals, and ecosystems."*
- WHO formed a One Health Initiative to **integrate work on human, animal and environmental health across the Organization**. One Health is enshrined in 2023 NDAA
- "Critical areas include **food production** and distribution, **urbanization** and infrastructure development, international **travel** and **trade**, activities that lead to **biodiversity loss** and **climate change**, and those that put **increased pressure on the natural resource base** – **all of which can lead to the emergence of zoonotic diseases.**" – WHO through One Health asserts jurisdiction over the entire planet.
- One Health: *"all life is equal, and of equal concern..." "We are as concerned about the welfare of non-human animals and the environment as we are about humans"*

The Lancet Editorial, 1/21/23. <https://www.thelancet.com/action/showPdf?pii=S0140-6736%2823%2900090-9>

Is One Health the theoretical justification to reduce us to the level of animals?
